

OUTSTANDING PERFORMANCE – Gilbert Guerrero, Engineering

The Outstanding Performance award recipient is Gilbert Guerrero who consistently delivers exceptional work and exhibits a keen ability to do so effectively and efficiently.

As a Civil Engineer Associate I, Gilbert joined the City of El Paso in 1995. A graduate of UTEP, his tenure with the Engineering Department has been a challenging one – and his performance has impressed everyone whom he has had contact with. As a project and construction manager, he was responsible for execution of major community infrastructure projects which had many, many critical elements and controversies. For example, the CBD III project involved removal and replacement of many sections of street and utilities in the heart of downtown El Paso – which required meetings with numerous businesses, citizens and agencies. His organizational, planning, and communication skills were vital to the successful completion of the project. Today, he manages the Sun Metro capital projects and is challenged in many other ways – but addressing them head on.

An individual like this is critical to the departmental mission – someone you can call upon to tackle whatever project, whatever deadline, whatever process.
