

END TB

If Active TB

is in your lungs, you may...

- cough a lot for weeks
- cough up mucus or phlegm
- cough up blood, or
- feel chest pain when coughing

Latent TB

waits beneath the surface . . .
might show **NO** symptoms!

If you have active TB,
you could...

- feel weak
- lose your appetite
- lose weight rapidly
- have a fever
- sweat a lot at night

For additional information, contact your local health department or doctor.
